EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Regarding the abstract, the abstract as submitted is acceptable. The issue is if the document number listed at the bottom of the abstract might cause a delay in printing. Therefore the abstract is reproduced below in its entirety without the smaller font document identifier.

Regarding claim 77, the remarks filed September 29, 2008 state on page 7 that "Claim 77 has been rewritten in independent form including all the limitations of the base claim and any intervening claims." It is noted that the word "a projection screen" were inadvertently omitted. Since it is clear from applicant's remarks that claim 77 was intended to be placed in independent form with all the limitations of the base claim, the following amendment is presented to correct this inadvertent omission. Claims 3-11, 73-76, and 78 remain as presented on September 29, 2008.

The application has been amended as follows:

Replace the abstract with the following:

ABSTRACT OF THE DISCLOSURE

A projection screen that includes a multilayer, multiband, single stack device that selectively reflects light with wavelengths in plurality of narrow wavelength bands, and methods for making the screen. The multilayer, multiband, single stack device may be an etalon device. The multiple layers may be deposited on a diffusing substrate. The projection screen may also include a polarizer that coacts with a projector. The projector polarizes the projected light in the narrow wavelength bands into the same polarity and the screen reflects the light with the same polarization and does not reflect light of another polarization. The polarizer may include substrate with a thin polarizing coating. The screen may include a matte surfaced diffuser.

Art Unit: 2862

In the claims, amend claim 77 as follows:

77. (currently amended) An optical device comprising:

a projection screen comprising

a first reflective layer and a second reflective layer for reflecting light toward each other through substantially continuous layers of dielectric material, each layer consisting essentially of a material having a different index of refraction (n) than the material of an adjacent layer, so that light of at least one; wavelength band destructively interferes in a space between the first reflective layer and the second reflective layer, so that incident light of said at least one wavelength band is attenuated by the device, wherein the first reflective layer and the second reflective layer reflect light of all wavelength bands in the visible spectrum.
